TD SYNNEX

Windows 11

Why and How to Migrate to Windows 11 Pro

The next step in the evolution of the PC.

Windows 11 Pro is purpose-built for secure hybrid work with a higher security baseline than Windows 10, including new requirements for protection, built in and enabled by default. It's the most secure Windows yet. Designed for modern devices optimized for security, it delivers the latest benefits of hardware-based protection, tightly integrated with software. With Windows 11 Pro, you can help your customers streamline management of the hybrid workplace while protecting data and access anywhere.

To stay competitive and secure in the digital era, your customers need modern, current software and hardware. Move them to Windows 11 Pro devices before support ends for Windows 10 on October 14, 2025. The upgrade and migration to Windows 11 Pro together with Microsoft 365 is crucial to ensure they're secure, supported, and up to date.

Powerful new capabilities. Familiar tools.

Windows 11 Pro offers a range of new features and capabilities, including:

Enhanced security

Faster deployment

Improved performance

Updating from Windows 10 allows your customers to leverage these new capabilities to save time and money, protect their business and empower employees — all with the same familiar tools and processes to manage both operating systems. Plus, Windows Autopilot accelerates deployment with zero-touch provisioning using Microsoft Entra ID (formerly Azure Active Directory) and Microsoft Intune.[1]

Deploy with confidence.

Plan

Leverage familiar tools and processes to unlock the potential of everyone in the organization.
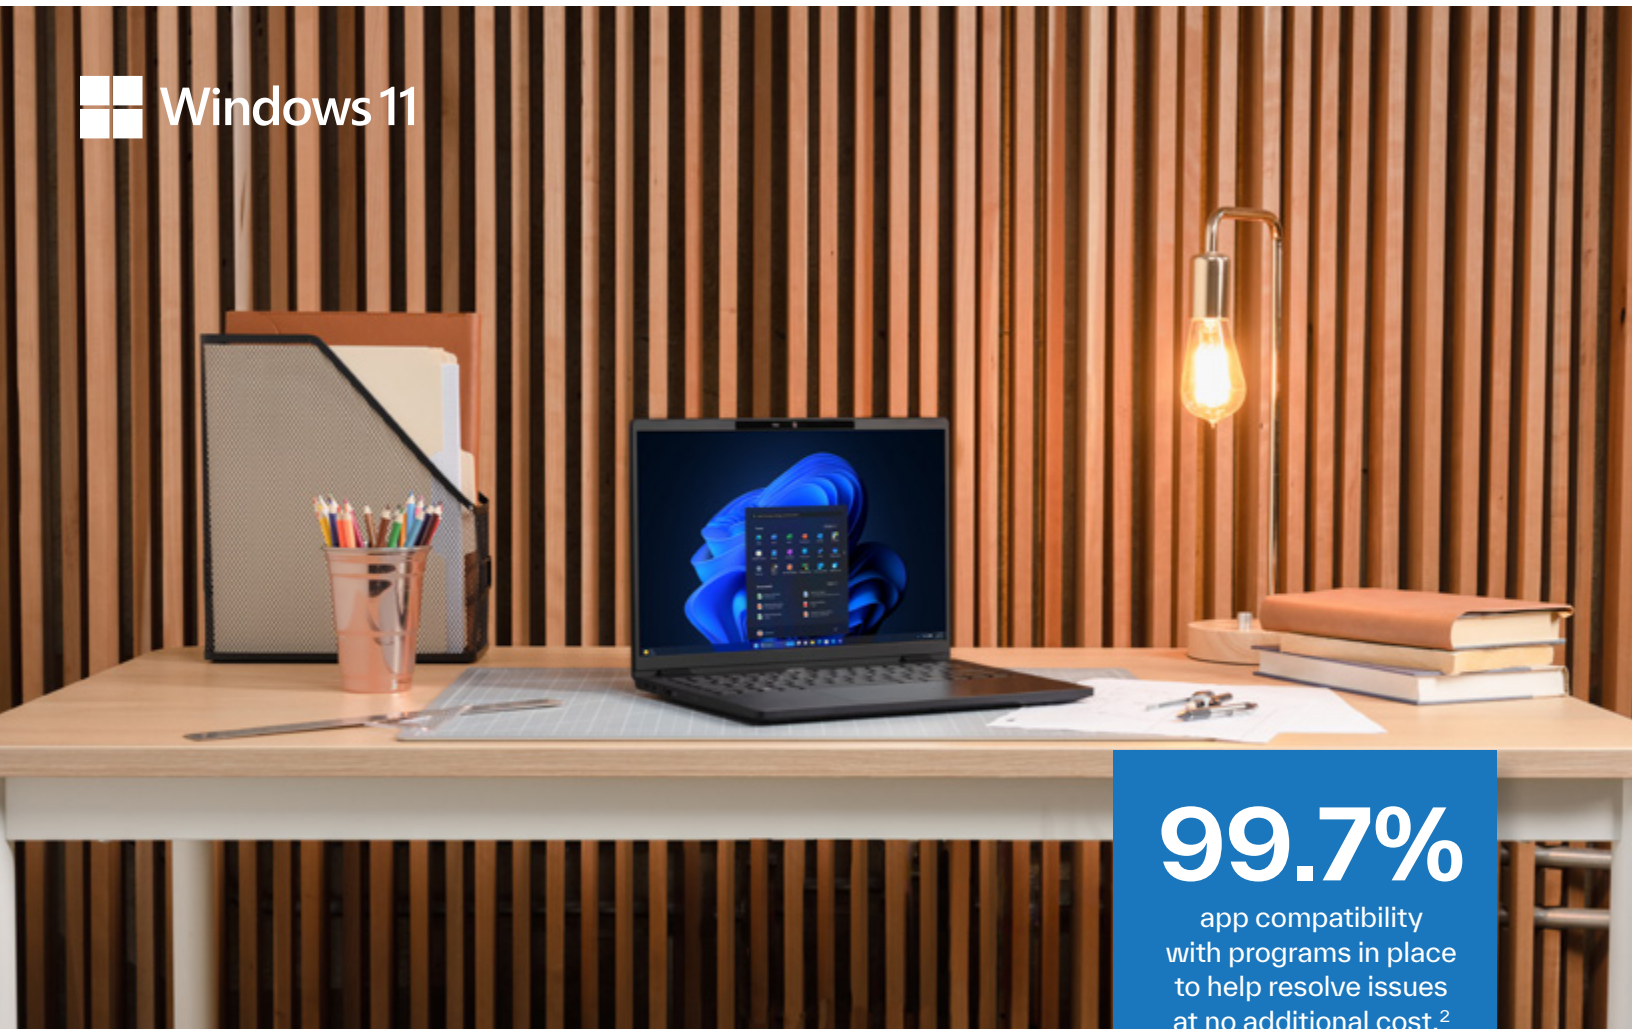

Prepare

Test critical apps and policies using Microsoft Intune and a preview with Test Base. Backed by App Assure, Windows 10 apps will be compatible.

Deploy

Use existing tools to implement pilot and broad deployments, simplify processes and accelerate velocity.

Windows 11

99.7%
app compatibility with programs in place to help resolve issues at no additional cost.[2]

Migration tools for Windows 11 Pro.

If you use Windows Server Update Service (WSUS), you'll need to sync the new Windows 11 Pro product category. After you sync, you'll see Windows 11 Pro as an option.

If you use Microsoft Configuration Manager, you can sync the new Windows 11 Pro product category and begin upgrading eligible devices.

If you use Microsoft Intune, analytics at the edge remain the best way for an organization to address checking across the organization for Windows 11 Pro upgrade eligibility information.

Start your Windows 11 Pro journey on the right foot.

Accelerate deployment of Windows 11 Pro with us. Our TD SYNNEX team will streamline, simplify and shorten your path to powerful new features. Reach out to **TDMicrosoft@tdsynnex.com** to take your first step toward a successful Windows 11 Pro refresh.
